

2025

Amazon Sustainability Report

Framework Summary

Overview

About Amazon

Amazon is a global company with more than 1.5 million full- and part-time employees worldwide and operations in North America, Latin America, Europe, Africa, the Middle East, and Asia-Pacific.

At Amazon, we combine data and science with passion and innovation to tackle some of the world's most urgent environmental and societal challenges. We set bold, long-term aspirations, such as The Climate Pledge—our goal to reach net-zero carbon emissions across our global operations by 2040—and create strategic, actionable plans to achieve them. This determined, solutions-focused approach guides our efforts to create lasting, positive change for our customers, employees, communities, and the planet.

About Our 2025 Framework Summary

Our 2025 Sustainability Reporting Framework Summary provides cross-references between our 2025 reporting and informational materials with related disclosures in reference to the following sustainability frameworks: the Global Reporting Initiative (GRI), the Sustainability Accounting Standards Board (SASB), the Task Force on Climate-Related Financial Disclosures (TCFD), the Task Force on Nature-related Financial Disclosures (TNFD), and the UN Guiding Principles (UNGP) Reporting Framework. All financial figures are reported in U.S. dollars (\$), unless otherwise stated. The data within this report reflects the period from January 1 through December 31, 2025, unless otherwise indicated.

Overview

- 2 Overview
- 3 Reporting Index: GRI, SASB, TCFD, and TNFD
- 17 TCFD Response
- 18 UNGP Reporting Framework Index
- 24 Priority Topics Assessment

TCFD Response

Our Approach

Amazon is investing in new solutions to decarbonize our business using our size, scale, and resources to drive progress across our supply chain and the industries in which we operate.

Through The Climate Pledge, our goal is to reach net-zero carbon emissions across our global operations by 2040, while inspiring and inviting others to take action. We recognize that progress will not always be linear, but we remain focused on serving our customers better, faster, and with fewer emissions.

Our strategy is set by Amazon's Sustainability team, is aligned with climate science and embeds decarbonization initiatives and efficiency improvements across our business and supply chain. Teams across Amazon are accountable for setting decarbonization plans that map back to Amazon's worldwide strategy, as ownership and accountability are essential to operational success and managing complexity.

Governance

An established governance framework enables climate change-related risks to be considered at our most senior business levels.

Board Oversight: The Board of Directors actively oversees Amazon's sustainability and corporate governance policies

and initiatives, receives periodic reports on and discusses our enterprise risk assessments, oversees and receives regular reports on our regulatory compliance, and reviews shareholder feedback on these topics as we evolve our practices and disclosures.

- The Nominating and Corporate Governance Committee is responsible for overseeing management of risks related to our sustainability and other environmental and corporate social responsibility practices, including risks related to our operations and supply chain and responsible AI development and AI governance.
- The Audit Committee is responsible for overseeing management of risks related to our financial statements and financial reporting process, business continuity, and operational risks, the qualifications, independence, and performance of our independent auditors, the performance of our internal audit function, legal and regulatory matters, our compliance policies and procedures, tax planning and compliance, and political contributions and lobbying expenses.

Management Oversight: The Chief Sustainability Officer oversees Amazon's Sustainability team and provides regular updates to the Nominating and Corporate Governance Committee. Amazon's Sustainability team coordinates efforts across the company to oversee operational changes that help reduce or eliminate carbon emissions in our businesses. We developed a companywide carbon system of record that provides information to business teams on their emissions and allows them to track decarbonization progress. The Sustainability team reports to the senior leadership team on various aspects of our environmental, sustainability, and other relevant practices on a quarterly basis. Amazon's senior leadership team also holds quarterly business reviews with the leadership teams of all our major businesses to track progress toward meeting our commitments under The Climate Pledge.

Strategy and Risk Management

Achieving our companywide goal of net-zero carbon emissions by 2040 will require sustained cross-business innovation and action. This is the same process of incremental innovation we apply to the overall development and growth of our business. We are developing business plans, investing in technologies, and exploring new approaches for transportation, packaging, and energy that help address climate change—all without sacrificing the speed and service customers expect from Amazon.

We consider climate risks and opportunities through our management of customer and stakeholder expectations, and business risks, and our monitoring of regulations, industry best practices, and emerging trends. Mechanisms are embedded across our business operations and strategic decision-making to address sustainability issues, including climate-related risks. We integrate sustainability practices into our everyday operations by thinking through risks and opportunities related to projects and initiatives, as well as setting goals, developing metrics and conducting a regular cadence of leadership reviews

We also develop data and tools to address physical climate risks for both our business and our customers, like the [Amazon Sustainability Data Initiative \(ASDI\)](#), which helps researchers, scientists, and innovators around the world advance their work on sustainability-related research.

We evaluate the potential impact of a risk or opportunity by considering, among other things, its implications for our stakeholders, our ability to leverage our scale to foster or advance progress, the expected time horizon, the degree of uncertainty, the likelihood of occurrence, and the regulatory and technological landscape.

We continue to evaluate, regularly monitor, and manage the short-, medium-, and long-term risks presented to

our business and supply chain by climate change. Amazon's Sustainability team centrally evaluates climate risk and engages business units and local teams to manage these risks. These potential negative impacts of climate change include:

- Increased operating costs due to more frequent extreme weather events or climate-related changes, such as rising temperatures and water scarcity
- Increased investment requirements associated with the transition to a low-carbon economy
- Decreased demand for our products and services as a result of changes in customer behavior
- Increased compliance costs due to more extensive and global regulations and third-party requirements
- Reputational damage resulting from perceptions of our environmental impact

We take these risks, and more, into account as part of our robust risk management approach, and we continue to build resilience to face these challenges. In addition, one of the most powerful tools we have for mitigating climate risks is collective action, which is how we are taking action toward a lower-emissions future—and [spurring others to join us on that journey](#).

Metrics and Targets

Regular and transparent reporting is an important part of our decarbonization strategy and a key expectation of The Climate Pledge. Measurement helps us, our customers, and our partners understand how efforts across our value chain are taking shape, especially for the longer term, as we progress toward our 2040 goal. We have a comprehensive understanding of emissions across our business and have performed extensive analysis to develop targets, strategies, and metrics to support our various decarbonization initiatives.

UNGP Reporting Framework Index

The UNGP Reporting Framework delivers comprehensive guidance for companies to report on how they respect human rights. Here, we index Amazon’s public content related to each subsection of the UNGP Reporting Framework, covering information up to June 2026.

Priority Topics Assessment

Identifying Our Priorities

Amazon's business spans many industries, including but not limited to e-commerce, cloud computing, consumer goods, entertainment, and logistics. We operate globally and employ more than 1.5 million full- and part-time employees worldwide. This broad scope means that we must consider how a wide range of topics relate to our business.

In 2024, we conducted a comprehensive topic assessment to inform the contents of our annual Sustainability Reports. We identified the topics that we believe are most relevant to our business and stakeholders globally as of 2024, most of which are consistent with previous analyses and with the topics covered in our past reports.

Our Process

Our assessment process was guided by leading reporting frameworks, including the Global Reporting Initiative (GRI), and consisted of the following phases:

Identify Topics

Through stakeholder research and industry analysis, we identified topics that could be relevant to Amazon and our stakeholders. We started with a long list of topics, which we consolidated into a smaller subset of more comprehensive topic groupings.

Engage with Stakeholders

We mapped key internal and external stakeholder groups across our value chain. We gathered their input through direct interviews, surveys, and analysis of written materials that reflect stakeholder perspectives.

Assess Inputs

We analyzed stakeholder inputs using a structured scoring framework. We evaluated each input based on the topics discussed by the source and the level of detail provided. For each source of input, we assigned a score for all topics discussed or referenced.

Prioritize Topics

We computed the total scores for each topic based on all stakeholder inputs and ranked topics by their total score. Higher-scoring topics ranked among our higher priorities. We shared these findings with key internal stakeholders and leaders.

Our Priority Topics

The following list represents our priority topics, many of which are examined in dedicated sections of this report. We view many of these topics as interconnected and recognize that making progress in one area can often help solve for challenges in another. The following topics are listed in alphabetical order.

- Biodiversity
- Business Ethics
- Communities
- Corporate Governance
- Customer Experience and Satisfaction
- Data Privacy and Security
- Emerging Technology
- Employee Attraction, Retention, and Development
- Inclusive Experiences
- Greenhouse Gas Emissions, Energy, and Climate Change
- Human Rights
- Labor Rights
- Materials, Waste, and Circularity
- Policy and Advocacy
- Product Safety and Quality
- Responsible Marketing and Advertising
- Water
- Workplace Health and Safety

We also recognize there are topics beyond these priorities that may be relevant to certain aspects of our business or to certain stakeholders. Amazon has programs and policies in place covering many other topics. While we may reference aspects of additional topics throughout this report, information about other topics can generally be found on our [corporate website](#) and/or our [sustainability website](#).

Monitoring Our Priorities

We continue to monitor the relevance of these topics and engage with stakeholders on an ongoing basis. We will conduct updates or additional assessments as we see changes to our priorities over time.

Disclaimer and Forward-Looking Statements

The information and opinions contained in this report are provided as of the date of this report and are subject to change without notice. Amazon does not undertake to update or revise any such statements. This report represents current Amazon policy and intent and is not intended to create legal rights or obligations. This report may contain, or incorporate by reference, public information not separately reviewed, approved, or endorsed by Amazon, and no representation, warranty, or undertaking is made by Amazon as to the accuracy, reasonableness, or completeness of such information. Inclusion of information in this report may be based on a variety of standards, frameworks, and considerations and is not an indication that the subject or information is material to Amazon's business, strategy, outlook, operating results, or financial condition or to its stakeholders, nor material as it relates to Amazon's impact on other parties or sustainability matters. This report was originally drafted in English and then translated into other languages. The English version is the authoritative version.

This report includes forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. All statements other than statements of historical or current facts, including statements regarding our plans, initiatives, projections, goals, commitments,

expectations, or prospects, are forward-looking. These forward-looking statements are inherently uncertain and difficult to predict. We use words such as aim, anticipate, believe, commit, drive, estimate, ensure, expect, goal, intend, may, mission, plan, project, seek, strategy, strive, target, will, or similar expressions to identify forward-looking statements. Forward-looking statements reflect management's current expectations and inherently involve risks and uncertainties. Actual results and outcomes could differ materially for a variety of reasons, including, among others, assumptions not being realized, initiatives or policies not being adopted, changing climate-related conditions and weather events, scientific or technological developments, evolving sustainability strategies, changes in consumer demand for carbon markets, evolving government regulations or policies, our expansion into new products; services; technologies; and geographic regions, or other changes in circumstances, as well as the factors set forth in the "Risk Factors" section of Amazon's most recent Annual Report on Form 10-K and subsequent filings. The standards of measurement and performance contained in the report are developing and based on assumptions, and no assurance can be given that any plan, initiative, projection, goal, commitment, expectation, or prospect set forth in this report can or will be achieved.
